ABSTRACTED-PUB-NO: NZ 241883A

BASIC-ABSTRACT:

A bait retaining open mesh bag (1) has an open end through which fishing bait (8) may be placed in the bag. The open end (4) of the bag has a rim (5) that includes two straight flexible members pivotally connected together at each end (6, 7) so holding the bag closed. When a force is applied to bring the pivotally connected ends (6, 7) together, the other portions of the flexible members flex apart causing the bag to open to allow bait to be placed in the

bag (1). A fish hook (9) is able to be threaded through the open mesh structure (2) of the bag (1) and the baited hook can be used in the normal manner for fishing.
